No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TAO kinases, and related polypeptides, are used to screen for modulators of stress-responsive mitogen activated protein (MAP) kinase pathways. These modulators are potentially useful for treating or preventing: (1) inflammation, autoimmune disease, cancer and degeneration (inhibitors of phosphorylation); or (2) insulin-resistant diabetes, metabolic disorders and neurodegeneration (enhancers of phosphorylation). TAO kinases are modulators and as immunoassay reagents for detecting TAO kinases. TAO kinases polynucleotides can be used: (a) for recombinant expression of TAO kinases; and (b) in the form of fragments, for detecting TAO kinase polynucleotides in standard hybridisation and amplification tests. TAO kinases are highly specific for MEK3.

                                                                                                                                                                                                                                             В
                                                                                                                                                                                                                                                                           Qy
                                                                                                                                                                                                                                                                                                                                                                                   which represent the human ORFX open reading frames 1 to 3161. The ORFX CS sequences have activities such as: cytostatic, hepatotropic; vulnerary; CC antipacoriatic; antiparkinsonian; noctropic; neuroprotective; costeopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; cantidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; can hithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating compatibilities as a second with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy certors. The proteins and nucleic acids may be used to treat cancers, cordiferative disorders, neurodegenerative disorders, osteoarthritis, corpoliferative disease, cardiovascular disease, diabetes mellitus, typertension, hypothyroidism, cholesterol ester storage, systemic lupus crythematosus, severe combined immunodeficiency (SCID), AIDS, viral, allerdise, aplastic anaemia, hurns, wounds hone and cartilage damage.
                                                                                                                                                                                                                                                                                                                 Matches

          The invention relates to novel human kinase proteins (PKIN) and nucleic acid molecules encoding them. PKIN is useful for identifying compounds that modulates its activity. PKIN cDNA is useful for assessing toxicity of a test compound. PKIN and its cDNA are useful for diagnosis, prevention and treatment of immune disorders such as acquired immune deficiency syndrome (AIDS), Addison's disease, anaem

PKIN CDNA is useful to detect upstream sequences such as promoters and regulatory elements, for creating knock in or knock out in humanised animals or transgenic animals to model human disease and for somatic or germline gene therapy for treating the above mentioned disorders. The present sequence is human kinase (PKIN)-7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sclerosis, asthma, osteoarthritis, osteoporosis, rheumatoid arthritis, ulcerative colitis and diabetes mellitus; growth and developmental disorders such as actinic keratosis, arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease (MCTD),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                              phosphorylation); or (2) insulin-resistant diabetes, metabolic disorders and neurodegeneration (enhancers of phosphorylation). TAO kinases are also used to raise specific antibodies, useful therapeutically as modulators and as immunoassay reagents for detecting TAO kinases. TAO kinase polynucleotides can be used: (a) for recombinant expression of TAO kinases; and (b) in the form of fragments, for detecting TAO kinase polynucleotides in standard hybridisation and amplification tests. TAO kinases are highly specific for MEX3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents rat TAO1 protein kinase, which is capable of phosphorylating MEK3 (a MAP/ERK kinase). TAO kinases, and related polypeptides, are used to screen for modulators of stress-responsive mitogen activated protein (MAP) kinase pathways. These modulators are potentially useful for treating or preventing: (1) inflammation, autoimmune disease, cancer and degeneration (inhibitors of
                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Fig 1; 95pp;

                                                                                                                                                                                                                                                                                                                                                    CC This sequence represents a consensus peptide sequence conained in novel CC STE20-related protein kinases. The invention relates to a nucleic acid conclude encoding a kinase polypeptide selected from STLK2, STLK3, STLK4, CC STLK5, STLK6, STLK7, ZC1, ZC2, ZC3, ZC4, KHS2, SULU1, SULU3, GEK2, PAK4 CC and PAK5. The proteins are used to identify agonists and antagonists, and Ct to raise antibodies. The polynucleotides are useful in gene therapy protocols. The polynucleotides, polypeptides, antibodies, antagonists and cc agonists may be used to treat diseases such as immune-related disorders cand diseases (e.g. rheumatoid arthritis, artherosclerosis, chronic costeoarthritis, psoriasis, atherosclerosis, arthaction, asthma, costeoarthritis, psoriasis, atherosclerosis, rhinitis, autoimmunity, candory of transplantation, chronic inflammatory pelvic disease, multiple collegosis, organ transplantation, myocardial infarction, cardiovascular collegoses, stroke, renal failure, oxidative stress related concurders disease and Leigh syndrome), cancer, cardiomyopathies, atherosclerosis, cancer, cardiomyopathies, cancer, cardiomyopathie
                                                                                                        Matches
                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             rhinitis; autoimmunity; organ transplantation; multiple sclerosis; myocardial infarction; cardiovascular disease; stroke; renal failure; oxidative stress-related neurodegenerative disorder; Parkinson's disease; amylotrophic lateral sclerosis; Leigh syndrome; cancer; cardiomyopathy; ischemic disorder; inflammation; diabetes mellitus; fibrosis; mitosis; mesangial disorder; growth regulation; wound healing; T cell activation;
                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel kinase-related polypeptides used for the diagnosis and treatment of kinase-related diseases and disorders \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   neuroprotective; cardiant; cerebroprotective; cytostatic; antidiabetic; vulnery; STE20; protein kinase; STEX2; STEX3; STEX4; STEX5; STEX6; STEX 2C1; C22; C23; C24; KHS2; SULU1; SULU3; GEX2; PAK4; PAK5; antagonist; antibody; gene therapy; rheumatoid arthritis; artherosclerosis; asthma; inflammatory bowel disease; Crohn's disease; osteoarthritis; psoriasis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antirheumatic; antiathritic; antiinflammatory; antiallergic; osteopathic; antipsoriatic; antiarteriosclerotic; antiasthmatic; immunosupressive;
                                                                                                                                                                                                                                                                         ischemic disorders, inflammatory disorders, diabetes mellitus, fibrotic and mesangial disorders. The proteins may also be useful for cell growtl regulation (e.g. in wound healing), T cell activation, mitosis control,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                            (ESTs). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. parkinson's disease. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tang YT,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cc identify agonists and antagonists, and to raise antibodies. The polynucleotides are useful in gene therapy protocols. The polynucleotides, entagonists and agonists may be used to treat cc polypeptides, antibodies, antagonists and agonists may be used to treat cd iseases such as immune-related disorders and diseases (e.g. rheumatoid arthritis, artherosclerosis, chronic inflammatory bowel disease (e.g. cc Crohn's disease), asthma, osteoarthritis, psoriasis, atherosclerosis, cc rhinitis, autoimmunity, and organ transplantation, chronic inflammatory pelvic disease, multiple sclerosis, organ transplantation, myocardial cc infarction, cardiovascular disease, stroke, renal failure, oxidative stress related neurodegenerative disorders (e.g. amylotrophic lateral cc cardiomyopathies, ischemic disorders, inflammatory disorders, diabetes cmallitus, fibrotic and mesangial disorders. The proteins may also be useful for cell growth regulation (e.g. in wound healing), T cell cativation, mitosis control, and as immunosuppressants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 10
                                                                                                                                                                              This polypeptide comprises human serine/threonine kinase KDS1, a novel protein associated with signal transduction. KDS1 has a K kinase domain related to that of Ste20 (KDS1 = Kinase Domain C related to Ste20). KDS1 cDNA (see AAX07074) was isolated from a C human bone marrow cDNA library. A clone (see AAX07075) encoding the highly homologous KDS2 (see AAW97677) was also obtained. Both KDS1 and KDS2 have Glu/Gln-rich regions at their C-terminus (see also AAW97678-79) suggesting an alpha-helical structure that may play a role in covalently localising these proteins to a specific site within the cells, which may be necessary for function. A method for producing KDS polypeptides in host cells is provided. Since KDS molecules have kinase activity, they are useful as modulating a gents in regulating a variety of cellular processes such as signal transduction pathways. These pathways may regulate cytoskeleton,
                                                                                                                    secretion, growth, apoptosis, superoxide generation, and spengene transcription. KDS polypeptides and polypucleotides caused for treating disorders involving aberrant expression of mammalian KDS genes. They can also be used for detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated vertebrate kinase - used to develop products for the diagnosis and treatment of disorders involving cellular processes

Bandman O,
Baughn MR,
                                    The present sequence is cell signalling protein-7 (CSIGP-7) encoded by cDNA obtained from Incyte clone 2948818 of KIDNFET01 library. It is expressed in reproductive, haematopoietic/immune and nervous tissues and is found to be homologous to serine/threonine protein kinase. Fragments of CSIGP encoding nucleic acid can be used as hybridisation probe for detecting CSIGP related sequences or allelic variants. Recombinant CSIGP can be produced in host cells by transforming them with genetically engineered vectors. Agonists or antagonists can be used in the treatment of cell proliferative and inflammatory disorders associated with decreased or increased CSIGP expression. CSIGP is used in
                  the diagnosis, prevention and treatment of cell proliferative disorders like arteriosclerosis, cirrhosis, cancer, hepatitis and inflammatory
                                                                                                                                                         Claim 1;
